Acme procurement Case study

Quote review, catalog guidance and approvals

William Bittner / 2 November 2026

Lio

Customer priorities

01 Reliable quote extraction

Prevent upload failures and make errors easier to review.

02 Negotiated articles

Surface relevant catalog prices while a request is created.

03 Acme accounting rules

Apply the customer’s category exceptions consistently.

Bonus

Less manual approval

Auto-approve qualifying Acme requests below €2,000.

Brief: prioritize value and document what needs more time.

Lio

Quote extraction flow

1

PDF text + OCR

Read the PDF; use local OCR for image-based text.

2

Structured extraction

The backend sends extracted text to the configured model.

3

Review

Compare fields with the quote; choose alternatives.

4

Save + approval

Store the request and apply the Acme approval rule.

OCR and matching are local. Model output is reviewed before a request is created.

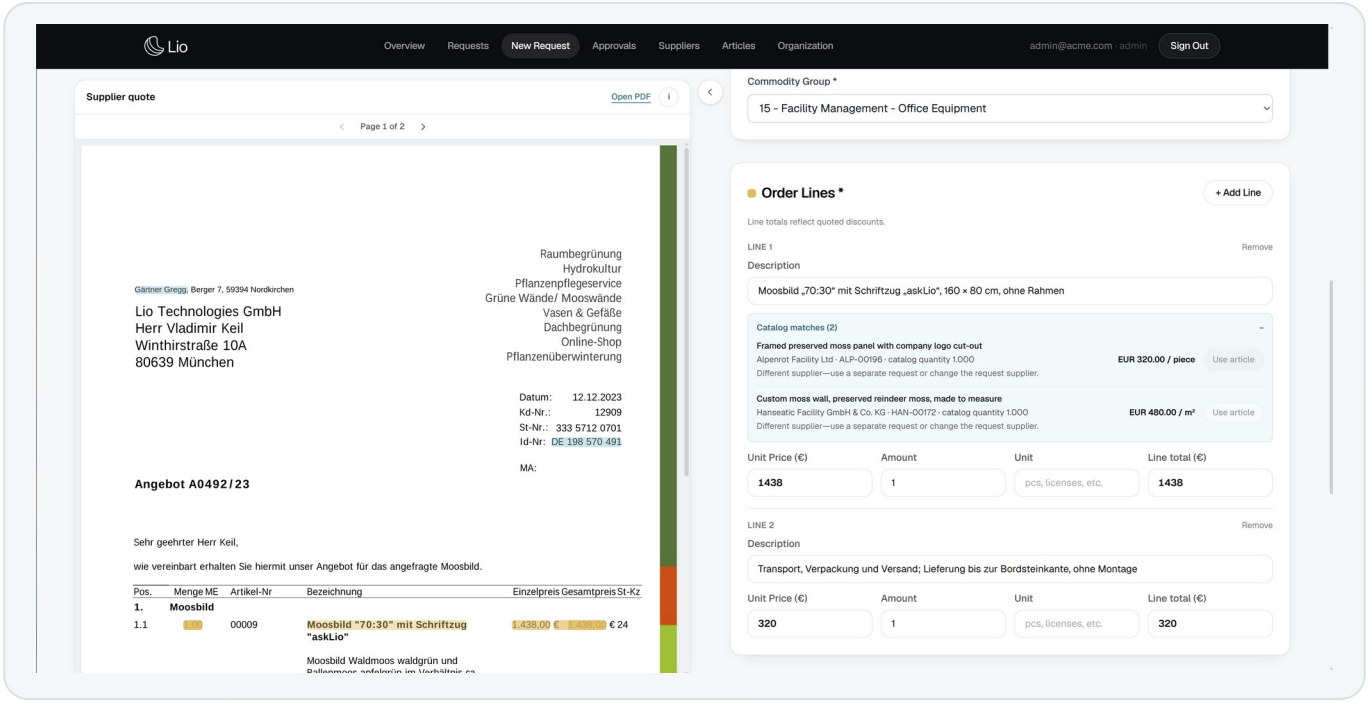

Lio

Reviewing a supplier quote

The requester can compare the document and request side by side.

Alternative positions can be added or swapped. Totals and VAT remain reviewable.

Highlights show possible text matches and are not proof of source.

Lio

Negotiated prices and Acme rules

Catalog suggestions

Find candidate articles in the customer’s own catalog and show supplier, unit and negotiated price.

The requester can inspect an article and explicitly apply a compatible supplier’s price.

Customer-specific categories

Cable ties	**Electrical Engineering**
Printer toner	**IT Hardware**
Monthly software subscription ≤ €20	**Office Supplies**

The €20 limit and tax basis need Acme’s confirmation.

Lio

Roles and approval

Requester	Creates and sees their own requests
Buyer	Reviews requests and can approve their own
Admin	Buyer capabilities plus member, data and settings management

ACME THRESHOLD

< €2,000

Automatically approved

€2,000 and above: manual approval.

Changes to request content trigger the approval check again.

Lio

Verification and limits

01 Five supplied quotes

15/15 live responses returned the expected gross totals and price patterns.

02 Automated tests

Backend and frontend tests cover extraction, matching, pricing, roles and approval rules.

03 OCR-supplemented extraction

styleGREEN supplier and VAT ID were recovered in all three API runs.

Known limits

AI and OCR can be wrong. Source highlights are approximate. Recorded totals are editable.

Lio

What I would do with more time

01 **Evaluate extraction quality**

Score real quotes, including scans and difficult cases.

02 **Rejection reasons and resubmission**

Show requesters why a buyer rejected a request.

03 **Better article suggestions**

Check product, unit and agreement terms across languages.

04 **Configurable customer rules**

Set approval and category policies for each organization.
